DEVELOPMENT RESOURCES

The GitHub development repository containing the code environment and backend setup of the website application is linked below.

https://github.com/KevoBro/ReforestationAR

SUGGESTED INTEGRATION

As our team has primarily focused on the user-facing interface of the app, another team has been building a database system and corresponding API for easier adding, editing, and deleting of models and assets.

We have only been the beginning of this project, and this separate backend environment was built to promote longevity and ease of use for Grow Back Augusta.

For connecting the two projects, additional information can be found in the other team's handoff documentation.
